Placental Malaria: Microbiome, Placental Infection, Cytokines, Hormones and Pregnancy Outcomes

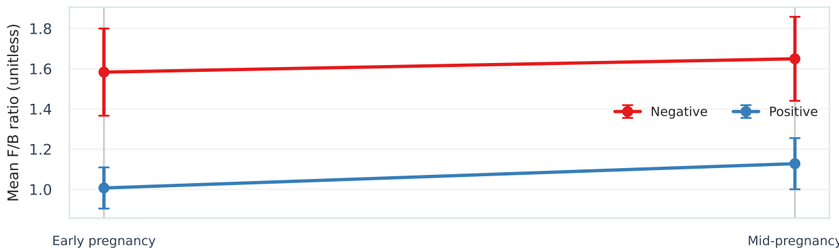

Exploratory relationships calculated from the available research measurements

Malaria group
Negative
Positive

GUT MICROBIOME — TAXON ABUNDANCE

FIRMIICUTES : BACTEROIDETES RATIO

GUT MICROBIOME

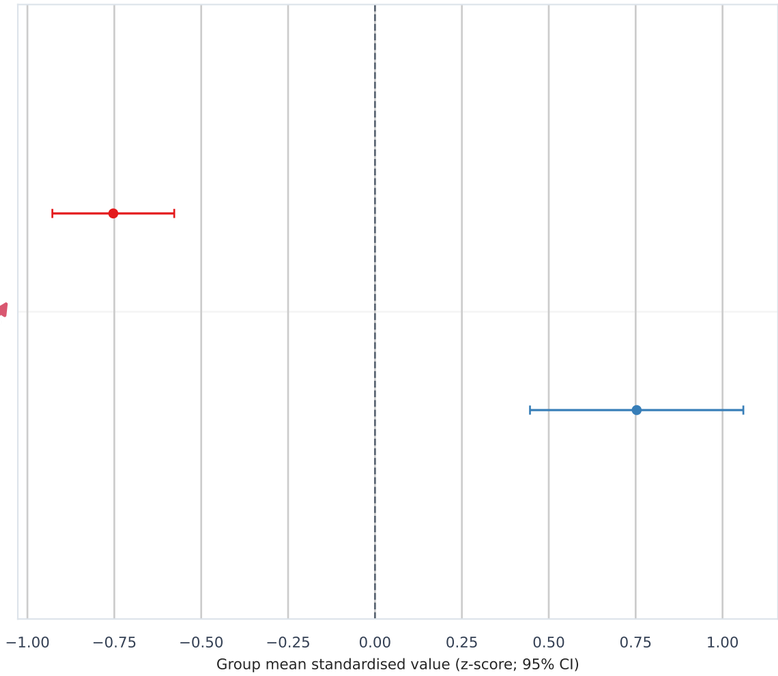

INFECTION MARKERS

Placental Hemozoin Score at Birth 0.3

PLACENTAL MALARIA

Central grouping / exposure variable

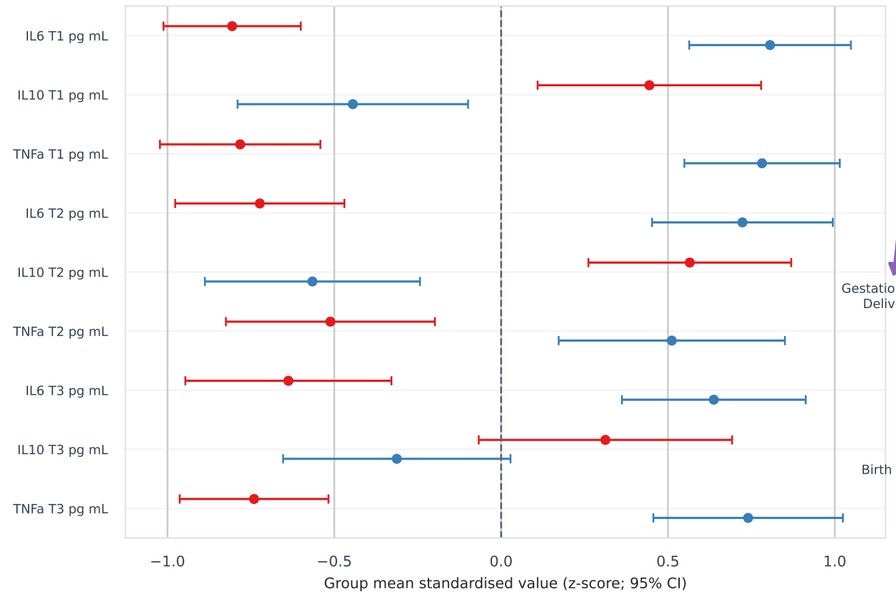

PLACENTAL INFECTION / PARASITE MARKERS

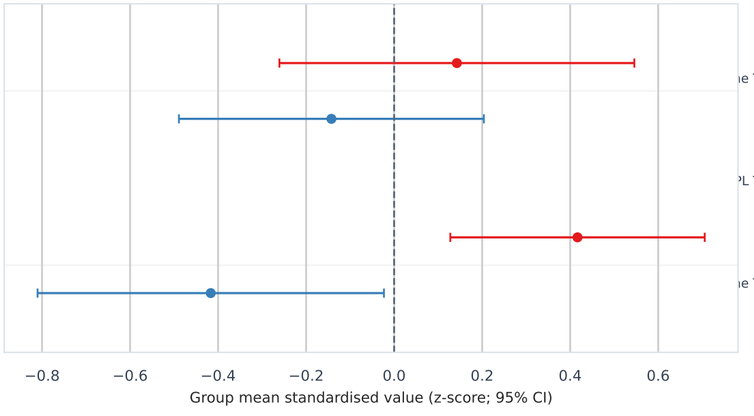

CYTOKINES

HORMONES

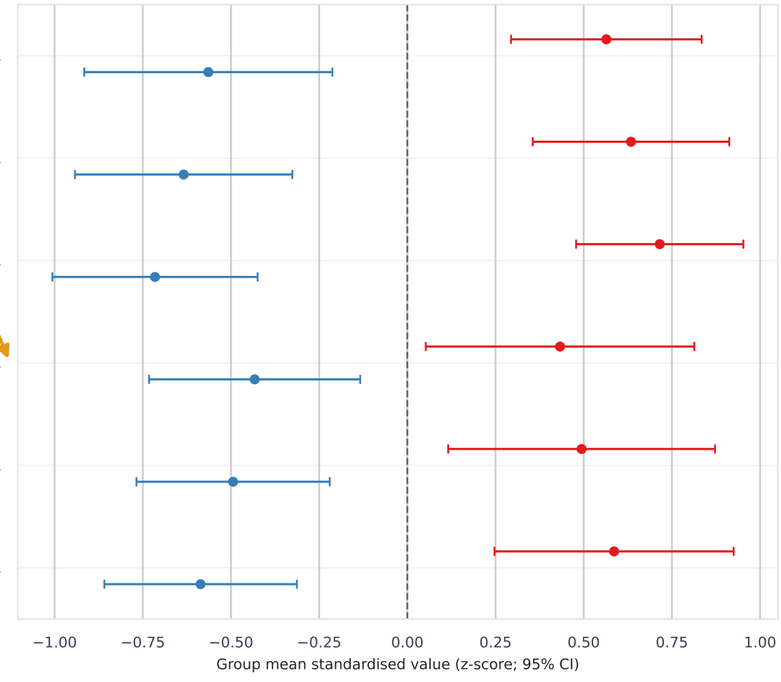

CYTOKINES — GROUP COMPARISONS

PREGNANCY AND BIRTH OUTCOMES

PLACENTAL HORMONES — GROUP COMPARISONS

Error bars indicate 95% confidence intervals for group means. Biomarker forest plots use variable-specific z-scores for comparison. Illustrations are schematic; arrows indicate conceptual connections, not demonstrated causal pathways. No p-values are shown.
